

Are You Preparing for Upgrades, Repairs, or Maintenance for Your Natural Gas Pipeline?

Gathering Systems plus Transmission & Distribution Pipelines

We Are Here To Help

[View as Webpage](#)

We know that requirements for limiting methane emissions are becoming more stringent, resulting in a national push to upgrade aging gas pipelines and to repair/maintain these systems at new levels for safety and GHG emissions mitigation.

Redmark and its partner, Onboard Dynamics, provide equipment to remove and store methane from gas pipelines in preparation for upgrades or repairs/maintenance.

In addition, we offer gas operations truck upfits & mobile compressor/storage systems to provide gas supply to buildings and homes during pipeline or meter repairs.

Easy Pipeline Maintenance with the GoVAC™

The new GoVAC™ is an integrated, modular unit that can evacuate pipelines quickly and safely without venting or flaring.

- No external power - the GoVAC™ runs on a small amount of the natural gas it evacuates.

- Portable/mobile.
- Flexible inlet/outlet pressure.
- Environmental reporting + 24/7 remote monitoring.
- Inject natural gas into an adjoining line or compress into a tube trailer.

Redmark Offers CNG Storage Solutions

To pair with the GoVAC™, Redmark offers small-scale CNG tube trailers (pictured). We can also refer customers to trusted manufacturers of larger-scale trailers. Contact Redmark to learn more.

CNG Trailer Maintenance

Redmark offers rebuild and refurbishment services for CNG fuel delivery trailers. These services include:

- Complete inspection.
- Maintenance and repair.
- Disassembly and reassembly of the high-pressure gas storage vessels, piping systems, valves, and other components to support DOT recertification.
